

ABSTRACT

A sweetener composition and a method of producing it. The composition contains granules having a core and a layer on the core. The core contains one or more nutritive sweeteners, such as sucrose, and the layer on the core contains sucralose. The
5 layer may optionally contain a binder and/or non-nutritive sweeteners in addition to sucralose. The composition may contain (other than materials of no essential significance) only such granules, or it may include such granules admixed with granules containing only nutritive sweeteners (such as sucrose). Compositions of the invention may exhibit a variety of advantages, including good sweetness homogeneity and good
10 stability under accelerated aging conditions.
